

## WIREGRID\* FACT SHEET

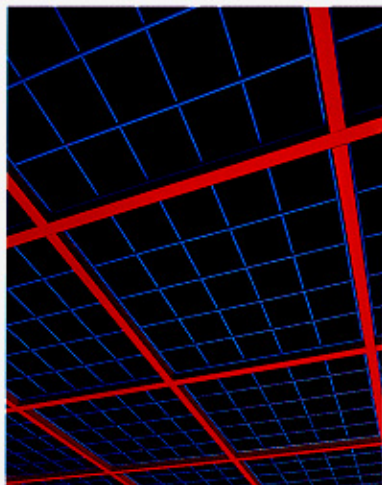

Boldly scaled of 1/4" diameter rigid steel wire in a unique welded pattern, WireGrid panels actually drop through the supporting grid to add a new, carefully detailed color geometry to the ceiling surface.

Panels simply lay on to any T-bar grid with a 15/16" exposed flange. WireGrid is recommended for use with T-Beam\*\* and can be installed "open plenum" or overlaid with standard acoustical board when noise reduction or elimination of all view of the plenum space is desirable.

Available in several standard sizes and finishes or any color specified, WireGrid adds a handsome new look to the designer's choice of ceiling treatments.
